Durosoft[®]

Naturally different.

Naturally derived polyglyceryl esters

Navigation

Introducing Durosoft®

Naturally different.

Durosoft® is a range of naturally derived polyglyceryl esters, developed to aid the demand for natural products and “green chemistries”, across a wide variety of personal care and cosmetic applications.

The Durosoft® range of natural ingredients is the starting point for creating or adapting your own personal care range

Our growing portfolio of personal care ingredients, Durosoft®, currently includes sustainable emulsifiers and solubilisers, that can be used for the production of creams, solid lotions and cleansing oils, micellar water formulations and other skincare and cosmetic products offering specific value for natural and sustainable raw material claims.

Durosoft key features

What customers value when formulating with Durosoft, is its COSMOS approved and sustainable credentials as RSPO Segregated (using sustainable palm oil) or alternative high quality oils (rapeseed and sunflower).

Durosoft® provides customers with the opportunity to develop naturally derived product applications across skin care, hair care, soap and bath, sun care and many other categories.

- » Sustainably sourced ingredients
- » COSMOS approved
- » Vegan
- » EO free
- » PEG free
- » Gluten Free
- » Prop 65 compliant
- » REACH compliant
- » Electrolyte tolerant
- » Natural origin index of 1 according to ISO 16128

Durosoft product applications

Durosoft HLB Range

The Hydrophilic-Lipophilic Balance (HLB) scale (0 to 20) indicates the size and strength of the hydrophilic and lipophilic moieties of a surfactant molecule.

Therefore, in a range of 3.5 to 6.0, surfactants are more suitable for use in W/O emulsions, whereas surfactants ranging from 8-18 are more suited to O/W emulsions.

The blue labels show Durosoft ingredients, while grey labels show ingredient functions to aid the right component choice when formulating.

HLB Value

Durosoft® PG4-O	4-6
Durosoft® PG4L-SG	8-10
Durosoft® PG10-O	8-10
Durosoft® PG10L-SG	11-12
Durosoft® PG10CY-MB	16-17

Durosoft PG4-O

Polyglyceryl-4 Oleate

Durosoft PG4-O is a water-in-oil emulsifier perfect for creating thick formulations with low oil content that easily break in application such as barrier creams, night creams and in sun protection products.

Durosoft PG4-O is naturally derived from sunflower seed oil, its lipophilic properties make it ideal for use in transparent and water free formulations such as oil cleansers, massage oils and solid moisturising bars.

Product features

INCI	Polyglyceryl-4 Oleate
Function	W/O Emulsifier
HLB Value	4-6
Usage	5.0 - 15.0%

Product applications

- » COSMOS approved
- » China compliant
- » W/O emulsifier
- » Emollient
- » Naturally derived
- » Skin and eye friendly
- » Preservative free
- » Ethoxylate free
- » GMO free
- » PEG free
- » Vegan
- » Dermatologically tested

Durosoft PG4L-SG

Polyglyceryl-4 Laurate

Durosoft PG4L-SG is an RSPO Segregated oil-in-water emulsifier suitable for the preparation of low viscosity cosmetic creams and lotions which distribute easily on the skin.

It is naturally derived from RSPO Segregated palm kernel oil and creates emulsions with a light feel on the skin allowing a formulator to easily change the sensory of a formulation by adding sensory modifiers.

Product features

INCI	Polyglyceryl-4 Laurate
Function	O/W Emulsifier
HLB Value	8-10
Usage	3.0 - 8.0%

Product applications

- » COSMOS approved
- » RSPO certified
- » China compliant
- » O/W emulsifier
- » Naturally derived
- » Skin and eye friendly
- » Preservative free
- » Ethoxylate free
- » GMO free
- » PEG free
- » Vegan
- » Dermatologically tested

Durosoft PG10-O

Polyglyceryl-10 Oleate

Durosoft PG10-O is an emulsifier, naturally derived from sunflower seed oil. It allows formulators to make stable oil-in-water creams and lotions with a pleasant skin feel.

Durosoft PG10-O has gelling properties which give unique sensory and texture in skin care applications. The lipophilic attributes from the oleic acid chain give added emollience and moisturisation benefits particularly in skin and hair care formulations.

Product features

INCI	Polyglyceryl-10 Oleate
Function	O/W Emulsifier
HLB Value	8-10
Usage	1.0 - 20.0%

Product applications

- » COSMOS approved
- » China compliant
- » O/W emulsifier
- » Emollient
- » Naturally derived
- » Skin and eye friendly
- » Preservative free
- » Ethoxylate free
- » GMO free
- » PEG free
- » Vegan
- » Dermatologically tested

Durosoft PG10L-SG

Polyglyceryl-10 Laurate

Durosoft PG10L-SG is an RSPO segregated oil-in-water emulsifier, perfect for creating creams and lotions with a pleasant and soft skin feel. It is naturally derived from RSPO segregated palm kernel oil and is an effective cleansing agent recommended for mild rinse off applications particularly facial cleansers and body washes.

This skin and eye friendly cleanser can gently remove make up, dirt and oil from the face and body.

Product features

INCI	Polyglyceryl-10 Laurate
Function	O/W Emulsifier
HLB Value	11-12
Usage	1.0 - 20.0%

Product applications

- » COSMOS approved
- » RSPO certified
- » China compliant
- » O/W emulsifier
- » Naturally derived
- » Skin and eye friendly
- » Preservative free
- » Ethoxylate free
- » GMO free
- » PEG free
- » Vegan
- » Dermatologically tested

Durosoft PG10CY-MB

Polyglyceryl-10 Caprylate

Durosoft PG10CY-MB is an effective non-ionic solubiliser of fragrances, essential oils and lipophilic oils into water-based systems. It is derived from RSPO Mass Balanced palm kernel oil, and is a natural alternative to commonly used petrochemically derived solubilisers such as PEG-40 Hydrogenated Castor Oil and Polysorbate-20.

Durosoft PG10CY-MB is a powerful cleansing agent and can be used in a wide variety of applications from liquid soaps and shower gels to shampoos and micellar waters.

Product features

INCI	Polyglyceryl-10 Caprylate
Function	O/W Emulsifier
HLB Value	16-17
Usage	1.0 - 20.0%

Product applications

- » COSMOS approved
- » RSPO certified
- » Solubiliser
- » Naturally derived
- » Preservative free
- » Ethoxylate free
- » GMO free
- » PEG free
- » Vegan

Sustainable Ingredients

Identifying Sustainable Palm Oil

Palm oil is one of the most widely consumed vegetable oils in the world. It is versatile, easy to process and yields 4–10 times more oil per hectare of land than other crops such as sunflower, rapeseed and coconut.

At present 80% of palm oil in the global supply chain comes from non-certified production.

Benefits of RSPO

- » Minimises negative impact on the environment
- » Aids conservation
- » Protects indigenous communities
- » Ensures fair labour practises
- » Empowers consumers to make informed choices
- » Aids poverty reduction

70%

of personal care and cosmetics products contain palm oil or palm oil derivatives

19%

of palm oil globally is certified by the RSPO

Why sustainable?

RSPO credits

.....

CLAIM

TRACEABILITY

Untraced palm oil with a trading scheme to support equivalent certified sustainable production.

MINIMUM STANDARD

The minimum when the other two options are not available.

Mass Balance (MB)

.....

CLAIM

TRACEABILITY

A mix of certified and uncertified palm oil - this is a temporary solution for when the best is not available.

INTERIM OPTION

“Contributes to the production of certified sustainable palm oil”

Segregated (SG)

.....

CLAIM

TRACEABILITY

Certified palm oil that is sustainable, fully traceable and meets the RSPO's standards.

100% SUSTAINABLE

Companies should aim for this standard.

Effective natural solubilizer Durosoft PG10-CY

👤 Agne Roke 📅 November 2019

Strong growth of natural Ingredients

As the demand for natural and sustainable personal care products continues to gather pace on a global scale, the importance of sensory, aesthetic and effectiveness aspects of product ranges need to match the increasingly high expectations of customers who want as much natural and clean ingredients as possible in their hair and skin care products they choose to buy. The global market for personal care products is expected to reach approximately \$500 billion by 2020. The market for product ingredients is likely to grow even faster over the same forecast period.

Valued at \$7.46 billion in 2014, the ingredients market is expected to reach almost \$12 billion by 2023.

Formulators and manufacturers need to be more aware than ever before of the latest trends in the personal care sector and the motivations behind consumers' product choice. With the market's value in constant growth, pressure continues to mount from consumers for the industry to clean up its environmental act and offer clean ingredients free from chemicals.

What is a solubilizer?

In the personal care and cosmetics industry, solubilizers help to make otherwise insoluble liquids soluble in water. Solubilizers are generally surfactants with an HLB between 13-18 and are usually more water soluble than oil-in-water (O/W) emulsifiers. Solubilizers and emulsifiers function on the same principle. Both help (at least) two immiscible ingredients to mix, usually oil and water.

The main difference is that by solubilisation, the particle size of the dispersed phase is so small that the final product appears transparent or translucent.

However, when emulsifying, the particle size is much higher and the product appears milky.

Due to their ability to complement the sensorial function by solubilizing perfume, fragrances and essential oils, solubilizers are widely used in a variety of applications in haircare, skincare and shower and bath products like shower gels, cosmetic bases, conditioners etc.

Natural solubilizers for fragrances on the rise

As most solubilizers available on the market are synthetic and natural products are in high demand. By using a natural solubilizer, the total percentage of natural materials in the final product also increases, making the product more appealing to consumers.

According to their properties, different solubilisers are used for different types of fragrances/EO.

Market demand for natural solubilisers such as Durosoft PG10-CY is increasing exponentially.

Durosoft PG10-CY was tested against other commercially available solubilizers with a selection of fragrances and EO, from categories based on Michael Edward's fragrance wheel. The 10:1 ratio of solubiliser: fragrance/EO gave the highest number of clear solutions across four of the solubilisers tested, whereas a 3:1 ratio of solubiliser: fragrance/EO produced solutions with the most haze. The study demonstrated the effective performance of a COSMOS approved, 100% naturally derived ester, establishing Durosoft PG10-CY a good option as an alternative to synthetic solubilisers such as PGE - Polysorbate 20 and PEG-40 Hydrogenated Castor Oil for cosmetic and personal care products.

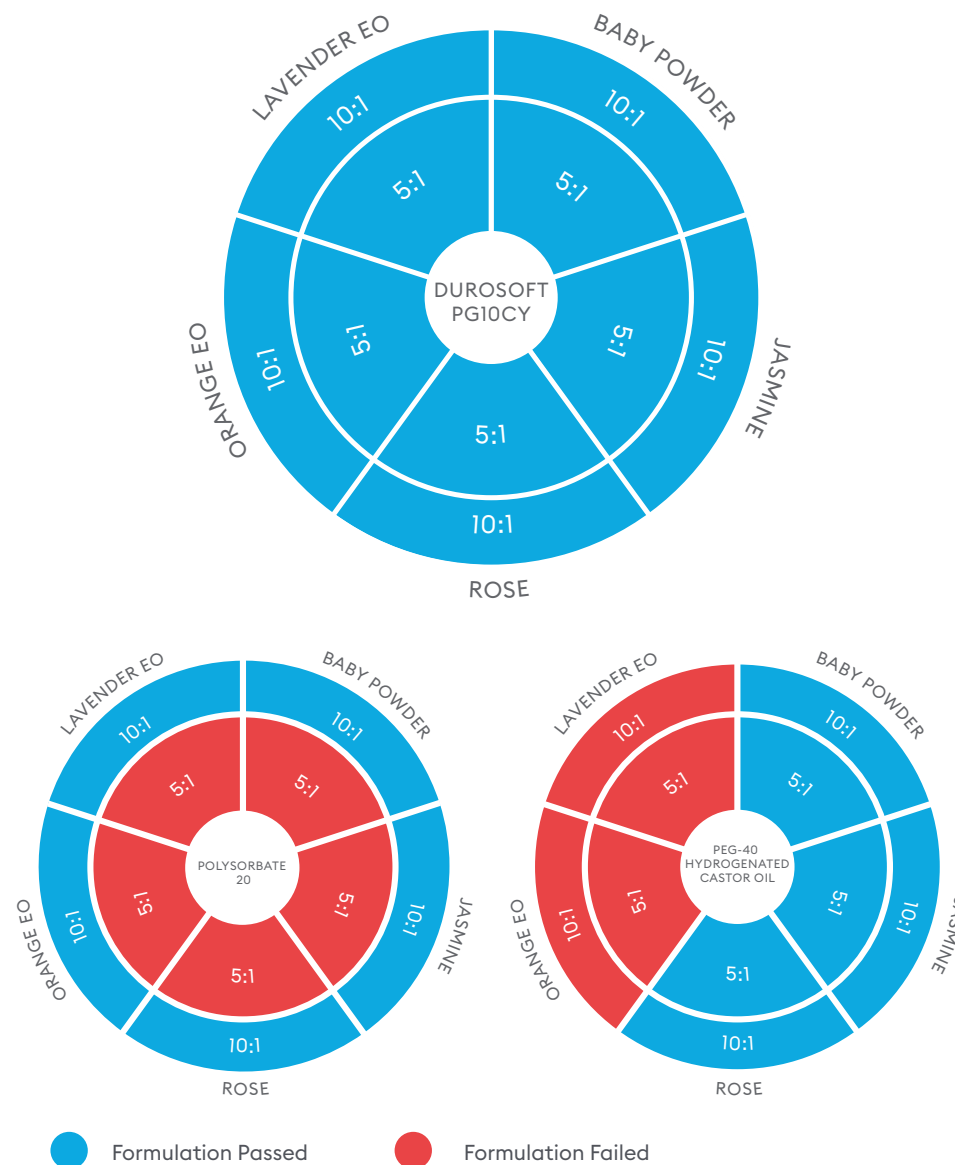

Image shows performance stability when using different oil to ingredient ratios. The same test was applied to test common synthetic solubilisers (Polysorbate 20 and Peg 40 hydrogenated castor oil) in comparison to natural solubilizer Durosoft PG10-CY.

Durosoft PG10-CY an effective natural solubilizer for fragrances

Part of Stephenson's naturally derived, COSMOS approved surfactants, emollients and solubilisers, Durosoft PG10 CY is an ingredient that can be used in a variety of haircare, cosmetic and personal care applications. It is COSMOS approved polyglyceryl-10 Caprylate and known to be an effective non-ionic solubiliser of fragrances, essential oils and lipophilic oils into aqueous systems due to the large polyglyceryl head group. The ingredient is effective in solubilising fragrances and essential oils in soap, bath, haircare and skincare products.

The full Durosoft range is a unique range of naturally derived monoglyceryl and polyglyceryl esters which use state of the art technology to provide natural alternatives to synthetic ingredients found in many cosmetic and personal care products. The diverse product range includes natural, RSPO (Roundtable on Sustainable Palm Oil) and palm free ingredients.

Manufacturers and formulators can be confident that formulating with Durosoft means greater access to a wider range of natural ingredients, esters that are compatible with oil and water phases, no deleterious effect on temperature sensitive ingredients and a broader array of HLB than other commonly used ingredients in the personal care market for a greater stability profile. In addition, as the range carries sustainable ingredients and it is PEG (polyethylene glycol) free, EO free and skin friendly, this represents great news for both consumers and the environment.
